

How to arrange your artworks

CMYK print washi tape:

1. Artworks need to be AI/PSD the better, or at least PDF.
2. Resolution of artworks need at least 400dpi
3. The repeat length of design to be **350mm**
4. Please make the designs with CMYK color mode
5. Take attention of bleeding(cutting machine request 1.5mm up and bottom as outer bleeding. Please kindly find below details for inner bleeding and outer bleeding knowledge)
6. The printing lines need 0.1mm at least.

Notice:

1. if you have patterns that are in the middle of tape or inside the tape and suppose not to be cut, then the patterns top and bottom need at least away from the tape top and bottom each 1.5mm --- Industrial call this Inner bleeding
2. If your tape has background pattern or color, then your artworks need to be extend 1.5mm up and bottom as outer bleeding for cutting off

CMYK print washi tape with foil OR solid foil washi tape

1. Artworks need to be AI/PSD the better, or at least PDF.
2. Resolution of artworks need at least 400dpi
3. The repeat length of design to be **250mm**
4. Please make the designs with CMYK color mode
5. Take attention of bleeding(cutting machine request 1.5mm up and bottom as bleeding space.Please kindly find above details for inner bleeding and outer bleeding knowledge)
6. Take attention of the foil patterns. Foil line to be at least **0.15mm** thick, the space between each foil line to be at least **0.4mm** or the foil line next to each other will be covered up.

Here below shows some patterns that need foil stamp:

the white parts are need holo silver foil, but after checking the AI file, we found that the red circle pointed: the space of some foil line next to each other do not reach 0.3mm, then the two foil line probably will be covered up.

1. During making design, please take attention to the join part:
The press machine will print the repeat design again and again,
have to make the joint part like a whole design

2. How to arrange your round adhesive sticker:

Normally the diameter of paper core in market is 32mm.

And XF washi tape factory has diameter paper core: 25mm/
32mm/ 38mm

If use 32mm diameter core, length of washi tape: 10m, then the diameter of whole tape will be 45mm

If use 25mm diameter core, length of washi tape: 10m, then the diameter of whole tape will be 40mm

If use 38mm diameter core ,length of washi tape:10m, then the diameter of whole tape will be 51mm

Then,XF washi tape factory will suggest size of adhesive sticker to be : 42mm

The effect show as below:
